

Every Property Served

Our Story

Our founders have more than **50 years** combined experience within the Construction, Real Estate, Property Management and Enterprise Software space. Throughout the years, this has revealed critical challenges experienced by their respective industries across all property types -- and subsequently the services they provide their customers.

They noticed that there is no industry-wide system that offers an all-encompassing solution for this problem and decided to create a platform capable of connecting what we identified are the key pillars in every business (**Owner, User, Service Provider, Supplier**) and allowed them to finally communicate in one integrated ecosystem.

Raven **TEAMS™** was born--the **Tenant Experience Automated Management System**. **TEAMS™** is a structured platform that offers digital solutions for tenants through a mobile phone interface. Supported by a Web Application for Property Managers called Raven **PM 365™**, this brought to life a seamless conduit for efficient communication, increased management visibility and a more fluid service fulfillment execution path.

Following the same design principles as Raven **TEAMS™** and **PM 365** that revolves heavily on Real Estate and Development, Raven has since branched out into other industries. For schools and universities, we have **Raven Educ**; for the retail and supply chains segment, we have **Raven StorM**; and finally, for the fleet management and logistics segment, we have **Raven Fleet**.

Our Technology

We are determined to **FUTURE PROOF Property Management, Asset Management and Facilities Management** including the business units related to it. Our progressive approach to developing more solutions is evidenced by our ability to create platform innovations and applications- which are all anchored in our patented technology. We pride ourselves not only in training the young and brilliant minds of the future, but also providing an environment where new ideas are cultivated and supported.

As part of the **Microsoft network**, our platform is diverse and is able to integrate with existing softwares in the market. Raven is developed purposely and integratively so we don't limit our customers if they have current applications already deployed to support their operations.

Microsoft Power Platform

The low-code platform that spans Office 365, Azure, Dynamics 365, and standalone applications

Power BI
Business analytics

Power Apps
Application development

Power Automate
Process automation

Power Virtual Agents
Intelligent virtual agents

- 7 Patents
